

PHOS-SURE®

Phos-Sure helps promote early root growth, vigor, and better overall plant structure. More phosphorus availability leads to higher realized plant potential.

Application Method:

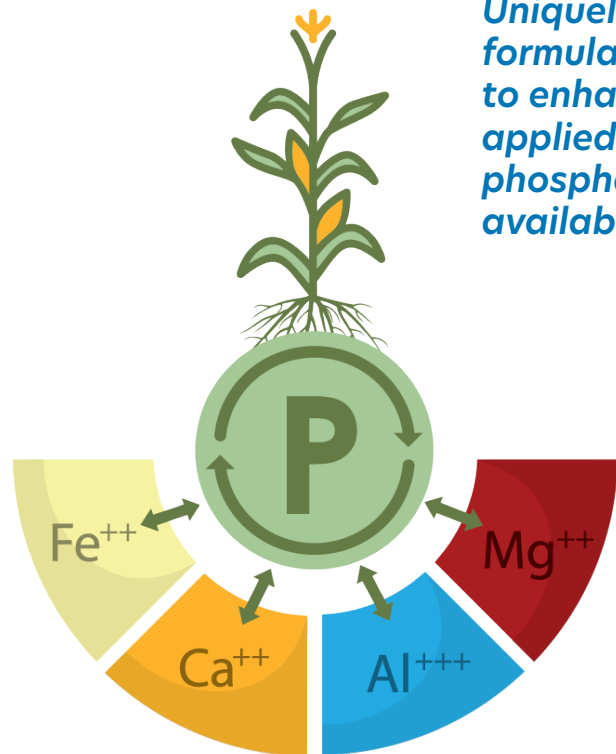

Use Rate: 3 qt/ton

Uniquely formulated to enhance applied phosphate availability.

Why Phos-Sure?

- Phos-Sure has a strong negative charge that bonds with positive cations.
- It limits the cation materials in the soil from the bonding with phosphate.
- It allows more of your applied phosphate to be free for crop uptake.

ANALYZE

Grid Soil Sampling

This is the first step to building your foundation for the upcoming year.

SELECT

+ Hybrid & Population Selection

Match hybrids to pH, fertility, and watering capacity, also consider yield goals and bu/1000 when deciding to raise or lower populations.

MANAGE

+ PHOS-SURE®

Allows for more of your applied phosphate to be free for crop uptake.

PLAN

+ Crop Protection Plan

Start with a clean field, use full rates up front, and overlap residuals.

NUTRIENT ENHANCERS & STABILIZERS
