

# SQUARE ONE™

Square One™ improves seed flow vs. talc or graphite and adds 3 modes of action to enhance seedling success for all crops. It provides nutrients, living microbes, and a biostimulant blend to support early plant growth. It is compatible with fungicide seed treatments, insecticide seed treatments, and inoculants, but does not replace them.

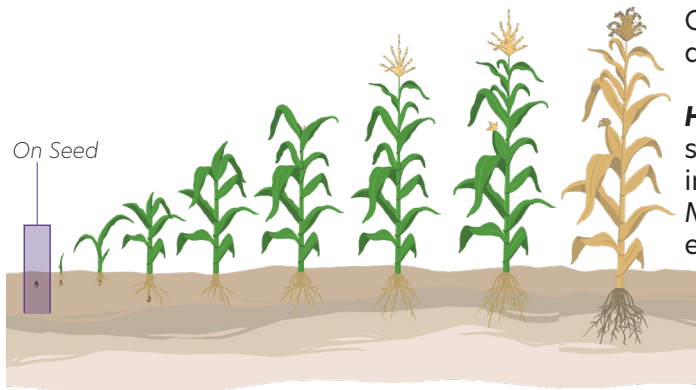

Application Method:

**Pretreat:** Seed box to seed box transfer

**Center fill planters:** Add Square One™ in conjunction with seed delivery to the planter

**Hopper boxes:** Add on top of seed after seed fill and gently stir in Square One™ for best results. Measuring scoops are provided in each container.

**Use Rate:** In ounces per 100 pounds of seed

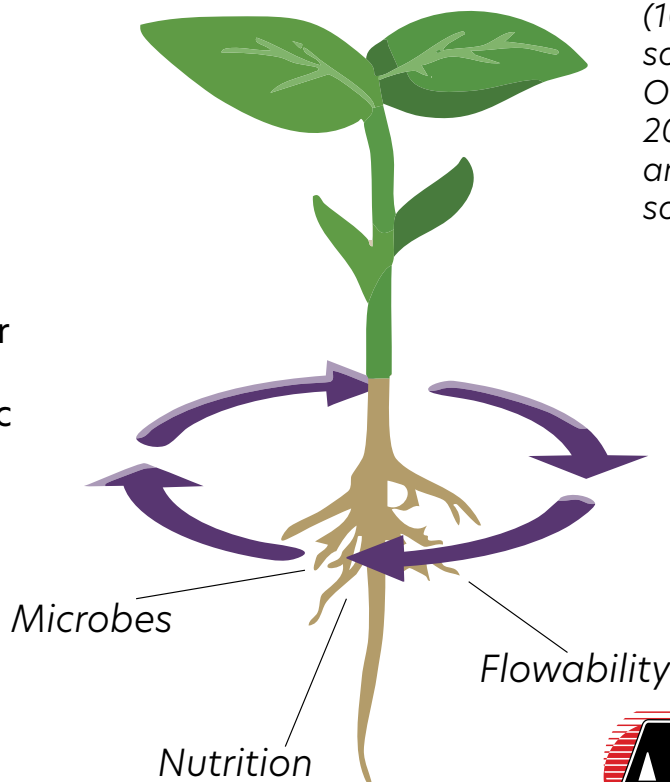

- Corn: 6 oz./cwt.
- Soybeans: 3 oz./cwt.
- Small grains: 1-3 oz./cwt.

**Packaging:** One shaker jug treats 1 box (50 units) of corn or 2 boxes (100 units) of soybean seed. One pail treats 200 units of corn and 400 units of soybeans.

## Why Square One™?

- **Seed Flowability:** Seed flowability agent plus talc and graphite in an 80/20 ratio for flowability and drying. This replaces the current talc or graphite being used.
- **Nutrients:** Calcium (4.0%), Sulfur (6.0%), Iron (1%), Molybdenum (0.05%), Manganese (4.0%), Zinc (10.0%).
- **Biological Enhancement:** Proprietary blend that improves stress tolerance, enhances nutrient-use efficiency, and accelerates plant growth and development.

## Root Zone Activity

**BIOSTIMULANT**
